PROFILE

A Java backend developer is responsible for building and maintaining the server-side of web applications, handling business logic, databases, and APIs. They use frameworks like Spring Boot or Jakarta EE to develop robust and scalable applications, manage data with databases like MySQL, and ensure secure communication between the frontend and backend. Java backend developers focus on optimizing performance, handling authentication, and integrating third-party services to create efficient and secure applications

WORK EXPERIENCE

React J.S   JUNE- 2024

infolabz it services pvt ltd

- Developed and created website HTML, Bootstrap, CSS.
